Experience

PAGCOR
2009 - Present
Croupier (Casino Dealer)

- Proficiently dealt with a variety of casino games, including blackjack, roulette, and poker, maintaining a high level of accuracy and fairness.
- Assisted customers with rules a
- Effectively handled cash and chips transactions, adhering to strict security and regulatory protocols.
- Collaborated with fellow dealers and supervisors to ensure smooth game operation and resolve any issues promptly.

About Me

Passionate about building interactive digital experiences. I boldly embraced the challenge of transitioning from a successful croupier career and embarked on becoming a Full Stack Web Developer. I enjoy talking to people and delivering their needs in the virtual world.

Education

Full Stack Web Development Bootcamp
Jan. 2023 - Jun. 2023
Uplift Code Camp

AD Management Systems Technology
2002 - 2007
Mapua Information Technology Center

Technical Projects

Buglift
Bug Tracking and Issue Management Application

- The app has multiple potential production use with Node.Js handling server-side operations, such as bug data validation, read/write with MongoDB, and manage communication between the frontend and backend through API calls.
- https://github.com/r4sy4n/buglift

Baccarat Game

- Created an enjoyable and dynamic replica of the traditional Baccarat card game using HTML, CSS and JavaScript.
- https://github.com/r4sy4n/baccarat-jsgame

Ecommerce App
Online platform where users can browse and purchase a variety of products

- Created a robust application that simplifies connectivity between buyers and sellers.
- Built with React(Vite) as Frontend and powered by Node.Js as Backend, utilized MongoDb to store data, and used Express.Js to handle server-side logic and API endpoints.
- Built it with Node.Js handles server-side operations, such as validating user authentication, interacting with the MongoDB database, and facilitating communication between the frontend and backend through API calls.
- https://github.com/r4sy4n/ecommerce-app
